

Configuring Eduroam with the „Configuration Assistant Tool“ (CAT) on macOS devices

Updated March 2020

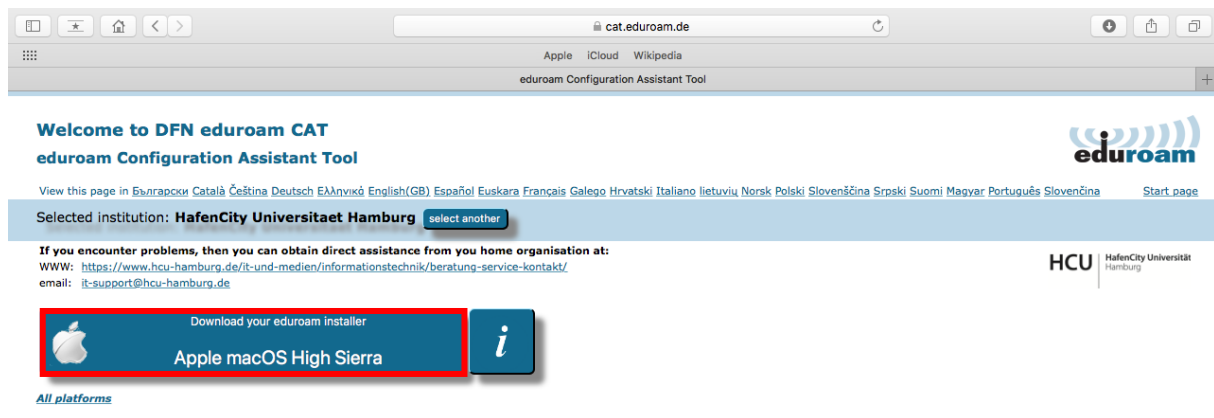

You have to be connected to the internet.

If you don't have access to the internet: Access HCU-Guest Wi-Fi network. Credentials for this Wi-Fi network are accessible from the internal part of hcu-hamburg.de.

Go to <https://cat.eduroam.org/> and switch to the English version.

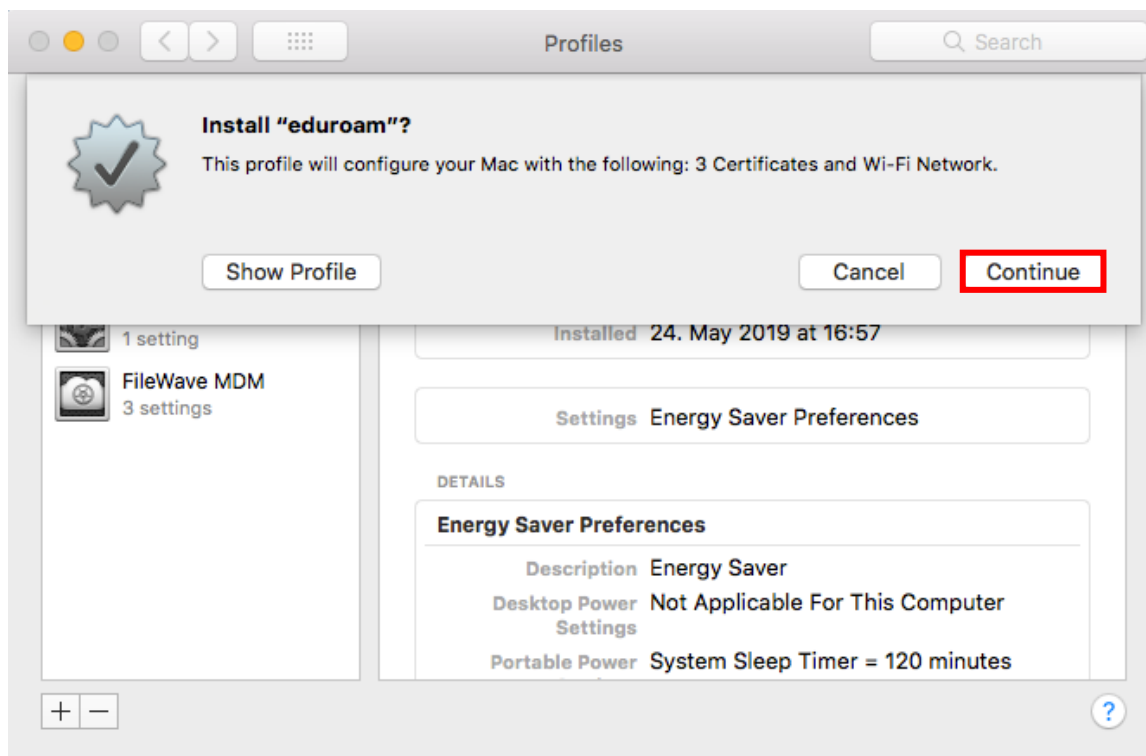

The image consists of two screenshots of the [cat.eduroam.de](https://cat.eduroam.org/) website. The top screenshot shows the 'Welcome to DFN eduroam CAT' page. A red arrow points from the text 'Click' to a button that says 'eduroam user: download your eduroam installer'. The bottom screenshot shows the 'Home institution' selection screen. A red arrow points from the text 'Click' to the search bar containing 'hafencity'. Another red arrow points from the text 'Search for Hafencity Universitaet' to the 'HafenCity Universitaet Hamburg' entry in the list.

HCU-IT → Instructions for Eduroam on macOS devices

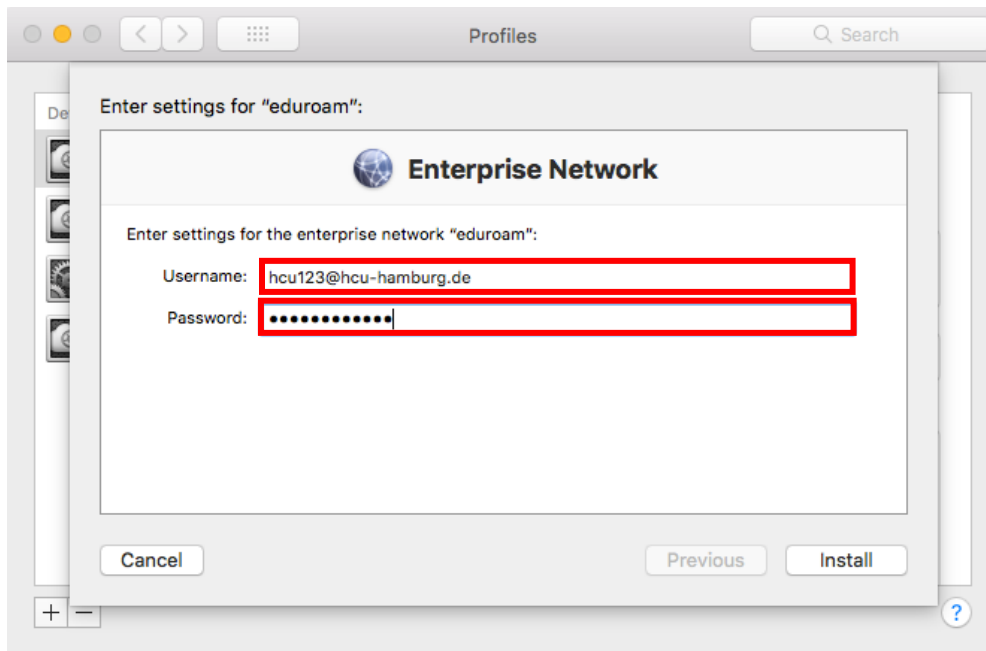

- Click the button to start the download.
- Leave the browser and go to your downloads.
- Open the downloaded file.

Opening the file will open your profiles.

- Click „Continue“.

HCU-IT → Instructions for Eduroam on macOS devices

→ Enter your HCU-username and password, for example hcu123@hcu-hamburg.de.

→ Click „Install“.

The installation is now complete. Your device should automatically connect to the Eduroam Wi-Fi Network.
