<b>Objectives and Contend</b>	ents			
Objective of Qualifica	tion (competencies)			
<ul> <li>A notion of the</li> </ul>	he concept of natural resource flows (	e.g., carbon cy	cle, urban hydro	logy, phosphorus cycle)
<ul> <li>"Ecological r</li> </ul>	numeracy": Knowledge of key data (e.	g., the distributi	on of populatior	across continents and their
growth trend	s, statistical reach of fossil fuel resour	ces, per capita	energy and wat	er consumption in different
parts of the	world), capability of estimating them in	h broad strokes	and performing	computations with them.
Knowledge	of international political efforts to prom	ote sustainabili	ty.	
<ul> <li>Basic notion</li> </ul>	of different disciplinary approaches to	wards operation	nalising the con	cept of sustainability (e.g.,
ecology, ecc	pnomics)			
Contents				
Overview of	selected global ecological sustainabili	ity deficits (e.g.	, climate change	; depletion of freshwater, soil
and forest re	sources; habitat fragmentation; persis	stent organic po	ollutants, etc.) wi	th a revisiting of their natural
science four	dations (at high school diploma level)			
The role of h	uman activities in creating these defic	its: Historically	, at present, and	I in scenarios of the future
<ul> <li>How sustain</li> </ul>	ability and sustainability deficits have	been perceived	l over the last ce	enturies. Classics of sustaina-
	e (e.g., Malthus, Carson, Schumache	-		
plinary appro	paches for the analysis of the sustaina	bility theme	-	
<ul> <li>Sustainabilit</li> </ul>	y politics: Guiding principles and actio	n plans the wor	ld has come up	with, at international, national
	els (Agenda 21, Green communities r

#### **Objectives and Contents**

Objective of Qualification (competencies)

- Ability to appreciate what constitutes the scientific method.
- Ability to critically reflect the scientific authority of different information sources.
- Ability to perform some basic inferential statistical analyses.

#### Contents

- Rules of academic work, esp. referencing sources.
- What constitutes scientific information? Case studies.
- Basics of inferential statistical analyses (hands-on work).

#### **Recommended Literature**

- Website "Understanding Science" of the University of California, Berkeley http://undsci.berkeley.edu
- Hand, David (2008). Statistics. A Very Short Introduction. Oxford University Press.
- Khan Academy. Statistics and Probability https://www.khanacademy.org/math/statistics-probability

#### Teaching and Learning Methods

Lecture (complemented by tutorial and individual student inputs for specific subjects), Plenum, excursions occasionally

#### Exam(s)

Precondition of Examination	
Type of Examination	Duration of Examination (if written or oral exam)
Term paper (S), written assignment (H)

Understanding of key types of instruments of environmental policy applied in selected jurisdictions (a. o. Germany and the U.S.). Contents     Human action, as conceptualised in law and economics.     Types of instruments of environmental policy: command-and-control regulation (limit values, BACT regulation), economic instruments (emissions trading, feed-in-tariffs, taxes and fees), information (right to know regulation), and planning (land-use and infrastructure planning) in theory and practice, with examples from Europe and around the world. Module Number	Module Name	Type (C/CE/E)	Semester (proposed	Module Coordinator	
REAP-M-Mod-104	Methods of Integrated Urban Planning	С	1.	Prof. Dr. Wolfgang Dickhaut	
Subject Area				Duration	
Fundamentals and Methods				1 semester	
CP (according to ECTS) Contact Hours/Week (SWS)			Self-study		

5 CP (= 150 h workload)         I: 1 (= 10,5 h contact time)         I: 61,5 h           II: 2 (= 21 h contact time)         II: 54 h	CP (according to ECTS)	Contact Hours/Week (SWS)	Self-study
	5 CP (= 150 h workload)		- ,-

#### **Objectives and Contents**

Objective of Qualification (competencies)

- Knowledge of methods of integrated planning, decision making and presentation skills.
- Self-organization and project-organization.
- Implementation of different methods and support of REAP project work (P1, P2 and P3).

#### Contents

I. Tools of Integrative Urban Planning (2,5 CP/ 1 SWS)

- Methodology of scenario techniques, thinking about the future in different variations, pictographic descriptions
  of different future scenarios.
- Introduction to instruments of economic evaluation of projects, application-oriented simplified methodology.
- Introduction to the goal tree (approaches, leading lines, objectives, assessment criteria).
- Project planning phases (site analysis, concept, development of overall framework, details, SWOT-analysis).
- Project structures, time management, (multicultural) decision making and network in projects/ working groups.
- Certification system "sustainability in neighborhoods" (introduction to DGNB system).
- Development of illustrations of existing data and concepts overlapping contents (integration).
- Graphic presentation methods (posters, flyers, brochures).

#### II. Introduction to GIS (2,5 CP/ 2 SWS)

- Knowledge about characteristics and complexity of spatial data (geometrical, thematic, topological, temporalcomponents) and the importance of a proper data modeling stage.
- Introduction to suitable GIS data models for a given application (advantages and disadvantages of vector and raster as well as methods for the transformations between each other).
- Introduction to suitable operations for a given application based on an understanding of the principles of basic geometrical, thematic and topological operations.

Basic principles of modern cartographical representation of qualitative and quantitative data

Precondition of Examination			
regular participation, successful completion of student report and oral presentation			
Type of Examination	Duration of Examination (if written or oral exam)		
Term paper (S), Presentation (R).			

Composition of Module Mark S, R = 100%

#### **Additional Information**

Previous Knowledge / Conditions for Participation (in form and content)

Successful completion of the module REAP-M-Mod-203 is required (in form)

Applicability of Module

Students have to select 2 modules of the block "Resources, Technologies and Environment" to attend REAP-M-Mod-309 Project III.

Frequency of Offering Each winter term

Course Language English

Valid from: WS 15/16

Update: 26.11.2020

#### Master Resource Efficiency in Architecture and Planning HCU Hamburg

Module Number	Module Name	Type (C/CE/E)	Semester (proposed	Module Coordinator	
REAP-M-Mod-303	Technologies for Sustainable Material Cycles	CE	3.	Prof. DrIng. Ingo Weidlich	
	Duration				
	1 semester				
CP (according to ECTS) Contact Hours/Week (SWS)				Self-study	
5 CP (= 150 h workload) 2 (= 21 h contact time)				129 h	

#### **Objectives and Contents**

Objective of Qualification (competencies)

- Knowledge of the standard technologies for material cycles and recycling.
- Competence of decision making in the field of selection of material related technologies.

#### Contents

- Planning strategies for long life cycles of buildings, building elements and building materials.
- Technologies for material conservation and appropriate construction.
- Technologies for building element (product) and building material (material) recycling.
- Planning procedures for recycling adapted construction and selection of materials.

#### **Recommended Literature**

varied

Teaching and Learning Methods

Lecture (complemented by seminar discussions, individual student inputs for specific subjects), Plenum, excursions occasionally

#### Exam(s)

Precondition of Examination				
regular participation, individual oral input, successful completion of student report and oral presentation				
Type of Examination Duration of Examination (if written or oral exam)				
Term paper (S), Presentation (R).				
Composition of Module Mark				
S, R = 100%				

#### **Additional Information**

Previous Knowledge / Conditions for Participation (in form and content)
Successful completion of the module REAP-M-Mod-201 is required. (in form)
Applicability of Module
Students have to select 2 modules of the block "Resources, Technologies and Environment" to attend REAP-M-Mod- 309 Project III.
Frequency of Offering
Each winter term
Course Language
English

Valid from: WS 15/16

#### Master Resource Efficiency in Architecture and Planning HCU Hamburg

118,5 h

Module Number	Module Name	Type (C/CE/E)	Semester (proposed	Module Coordinator
REAP-M-Mod-304	Economics and Planning of Technical Urban Infrastructure Systems	CE	3.	Prof. Irene Peters
	Duration			
	1 semester			
CP (according to ECTS) Contact Hours/Week (SWS)			Self-study	

#### **Objectives and Contents**

Objective of Qualification (competencies)

5 CP (= 150 h workload)

 Appreciation of principles underlying the (economic) functioning of technical urban service markets (elements of "Industrial Organisation" and "Regulatory Economics").

3 (31,5h contact time)

- Appreciation of the need for regulation of technical infrastructural services markets.
- Appreciation of infrastructural planning law in concert with urban development and stakeholder actions.

#### Contents

- Basic economic and legal concepts relevant for technical infrastructure service markets
- Glimpses into the history of regulation, liberalization, de- and re-regulation of technical infrastructure sectors in the U.S. and Europe with exemplary emphasis on Germany
- Examples of infrastructural planning law at European Community and German national levels
- Examples of real-world implementation of technical urban services projects (e.g. heating grids, renewable power facilities installations ...), in their technical and project development aspects
- Reflection on aims and success of regulatory reform and planning law provisions in the technical urban service sectors, esp. in light of their contribution to sustainability goals

#### **Recommended Literature**

Varying, will be provided prior to course.

#### Teaching and Learning Methods

Seminar including excursions during lecture time period plus one weekend workshop for dealing with case study. Plenum

#### Exam(s)

Precondition of Examination	
regular participation	
Type of Examination	Duration of Examination (if written or oral exam)
Term paper (collection) (S).	
Composition of Module Mark	
S = 100%	

#### **Additional Information**

Previous Knowledge / Conditions for Participation (in form and content)

A basic understanding of the (technical) functioning of technical urban infrastructure systems like energy (power and heat) and water supply, wastewater and solid waste management. (content)

#### Applicability of Module

Students have to select 2 modules of the block "Resources, Institutions and Instruments" to attend REAP-M-Mod-309 Project III.

#### Frequency of Offering Each winter term Course Language

English

Valid from: WS 15/16

	ion, take-home written exam	ccessiui completi	UN UN SEVERAI SI	nan nomeworks, student
Type of Examination		Duration of C	omination (if w	ritten er erel evem)

Type of Examination	Duration of Examination (if written or oral exam)
Term paper (S) (Homeworks during lecture time) or Presentation (R) (student presentation incl. a written ver- sion thereof)	
Composition of Module Mark	

S, R = 100%

**Additional Information** 

Previous Knowledge / Conditions for Participation (in form and content)

Knowledge of mathematical methods at O-Level exams or General Certificate of Secondary Education (Calculus: Differentiation and Integration)

Applicability of Module

Students have to select 2 modules of the block "Resources, Institutions and Instruments" to attend REAP-M-Mod-309 Project III.

Frequency of Offering

Each winter term

Course Language

English

Valid from: WS 15/16

#### Master Resource Efficiency in Architecture and Planning HCU Hamburg

Module Number	Module Name	Type (C/CE/E)	Semester (proposed	Module Coordinator	
REAP-M-Mod-306	Material Flow Analysis and Life Cycle Assessment	CE	3.	Prof. DrIng. Ingo Weidlich	
Subject Area				Duration	
Resources, Institutions and Instruments				1 semester	
CP (according to ECTS) Contact Hours/Week (SWS)				Self-study	
5 CP (= 150 h workload) 2 (= 21 h contact time)				129 h	

#### **Objectives and Contents**

Objective of Qualification (competencies)

• Understanding the principles and application of Material Flow Analysis and Life Cycle Assessment.

#### Contents

- Principles of Material Flow Analysis (MFA) and Life Cycle Assessment (LCA), their foundations, extensions and limitations.
- Computer-aided application of MFA and LCA.
- Computer aided Life Cycle Assessment (according to ISO 14044), application:
  - Goal and scope definition.
  - Life cycle inventory analysis (LCI); including data collection, definition of system boundaries, modelling of material flows.
  - Life cycle impact assessment (LCIA); including selection of impact categories, category indicators, characterization models, normalization.
  - Life cycle interpretation.

#### **Recommended Literature**

Varying, will be provided prior to course.

#### Teaching and Learning Methods

Lecture (complemented by seminar discussions, individual student inputs for specific subjects, case studies of LCA), Plenum, excursions occasionally

#### Exam(s)

Precondition of Examination				
regular participation, successful completion of student report and oral presentation				
Type of Examination	Duration of Examination (if written or oral exam)

#### Master Resource Efficiency in Architecture and Planning HCU Hamburg

900 h

Module Number	Module Name	Type (C/CE/E)	Semester (proposed	Module Coordinator
REAP-M-Mod-401	Thesis	С	4.	Prof. Dr. Martin Wickel
Subject Area			Duration	
Projects/ Thesis			1 semester	
CP (according to ECTS) Contact Hours/Week (SWS)			Self-study	

#### **Objectives and Contents**

Objective of Qualification (competencies)

30 CP (= 900 h workload)

• Application of the appropriate technical, scientific and/ or artistic methods proving the ability to work independently on a special topic in a short, fixed period and demonstration of a thorough knowledge/ understanding of the subject

-

- Deepening abilities in interdisciplinary work alongside the ability to develop disciplinary methods/ knowledge and applying them in other fields
- Development of core skills: communication, cooperation and a multi- and interdisciplinary approach

#### Contents

- Students should make suggestions about the contents of their thesis
- Targets and contents of theses outside the REAP-contents have to be approved
- **Recommended Literature**

Defined by selected thesis topic.

Teaching and Learning Methods

Thesis: Autonomous work (students are supported by the appropriate REAP-specialist).

Further important information can be found on the HCU-Website (Master > REAP > For Students > REAP Master Thesis Infos).

#### Exam(s)

Precondition of Examination		
The thesis has to be written by single student, students wishing to work together (maximum 2) have to apply for it. The thesis must be completed within 22 weeks. At the end of the fixed period the student has to submit a written report.		
Type of Examination	Duration of Examination (if written or oral exam)	
The final assessment of the thesis is an oral exam (collo- quium) and a presentation (TH, PR, KO). Submission: The thesis must be submitted digitally to the Examination Office not later than on the last day of the processing period. For the digital submission please save your work as pdf in the HCU-Cloud <u>https://cloud.hcu- hamburg.de</u> with the file name as following "Last name thesis BA or MA". Further information: <u>www.hcu- hamburg.de/en/student-services/examination-office/thesis- examination/</u>	Time limit 22 weeks	
Composition of Module Mark		
TH = 75%, PR + KO = 25%		
The grade is determined by both reviewers equally.		

#### Additional Information

Previous Knowledge / Conditions for Participation (in form and content)		
Successful participation in modules REAP-M-Mod-105, REAP-M-Mod-204 and REAP-M-Mod-309.		
Applicability of Module		
The thesis is the final assessment for the master programme REAP.		
Frequency of Offering		
Each winter and summer term.
