Master Resource Efficiency in Architecture and Planning HCU Hamburg

Module Number	Module Name	Туре	Semester	Module Coordinator
		(C/CE/E) C	(proposed	
REAP-M-Mod-101	Facets of Sustainability	L L	1.	Prof. Irene Peters
	Subject Area			Duration
	Fundamentals and Metho	ds		1 semester
		u5		i semester
CP (according to ECTS)	Contact Hours	Week (SWS)	Self-study
	e (= 150 h workload)	2 (=21h co		129h
0.01		2 (-2 111 00		12011
Objectives and Contend	ents			
Objective of Qualifica	tion (competencies)			
 A notion of the 	he concept of natural resource flows (e.g., carbon cy	cle, urban hydro	logy, phosphorus cycle)
 "Ecological r 	numeracy": Knowledge of key data (e.	g., the distributi	on of populatior	across continents and their
growth trend	s, statistical reach of fossil fuel resour	ces, per capita	energy and wat	er consumption in different
parts of the	world), capability of estimating them in	h broad strokes	and performing	computations with them.
Knowledge	of international political efforts to prom	ote sustainabili	ty.	
 Basic notion 	of different disciplinary approaches to	wards operation	nalising the con	cept of sustainability (e.g.,
ecology, ecc	pnomics)			
Contents				
Overview of	selected global ecological sustainabili	ity deficits (e.g.	, climate change	; depletion of freshwater, soil
and forest re	sources; habitat fragmentation; persis	stent organic po	ollutants, etc.) wi	th a revisiting of their natural
science four	dations (at high school diploma level)			
The role of h	uman activities in creating these defic	its: Historically	, at present, and	I in scenarios of the future
 How sustain 	ability and sustainability deficits have	been perceived	l over the last ce	enturies. Classics of sustaina-
	e (e.g., Malthus, Carson, Schumache	-		
plinary appro	paches for the analysis of the sustaina	bility theme	-	
 Sustainabilit 	y politics: Guiding principles and actio	n plans the wor	ld has come up	with, at international, national
	els (Agenda 21, Green communities r

Objectives and Contents

Objective of Qualification (competencies)

- Ability to appreciate what constitutes the scientific method.
- Ability to critically reflect the scientific authority of different information sources.
- Ability to perform some basic inferential statistical analyses.

Contents

- Rules of academic work, esp. referencing sources.
- What constitutes scientific information? Case studies.
- Basics of inferential statistical analyses (hands-on work).

Recommended Literature

- Website "Understanding Science" of the University of California, Berkeley http://undsci.berkeley.edu

5 CP (= 150 h workload)	I: 1 (= 10,5 h contact time) II: 2 (= 21 h contact time)	l: 61,5 h ll: 54 h

Objectives and Contents

Objective of Qualification (competencies)

- Knowledge of methods of integrated planning, decision making and presentation skills.
- Self-organization and project-organization.
- Implementation of different methods and support of REAP project work (P1, P2 and P3).

Contents

I. Tools of Integrative Urban Planning (2,5 CP/ 1 SWS)

- Methodology of scenario techniques, thinking about the future in different variations, pictographic descriptions
 of different future scenarios.
- Introduction to instruments of economic evaluation of projects, application-oriented simplified methodology.
- Introduction to the goal tree (approaches, leading lines, objectives, assessment criteria).
- Project planning phases (site analysis, concept, development of overall framework, details, SWOT-analysis).
- Project structures, time management, (multicultural) decision making and network in projects/ working groups.
- Certification system "sustainability in neighborhoods" (introduction to DGNB system).
- Development of illustrations of existing data and concepts overlapping contents (integration).
- Graphic presentation methods (posters, flyers, brochures).

II. Introduction to GIS (2,5 CP/ 2 SWS)

- Knowledge about characteristics and complexity of spatial data (geometrical, thematic, topological, temporalcomponents) and the importance of a proper data modeling stage.
- Introduction to suitable GIS data models for a given application (advantages and disadvantages of vector and raster as well as methods for the transformations between each other).
- Introduction to suitable operations for a given application based on an understanding of the principles of basic geometrical, thematic and topological operations.

Basic principles of modern cartographical representation of qualitative and quantitative data

REAP-M-Mod-304 Infrastructure Systems		CE	3.	Prof. Irene Peters	
	Duration				
	1 semester				
CP (according to ECTS) Contact Hours/Week (SWS)				Self-study	

Objectives and Contents

Objective of Qualification (competencies)

5 CP (= 150 h workload)

 Appreciation of principles underlying the (economic) functioning of technical urban service markets (elements of "Industrial Organisation" and "Regulatory Economics").

3 (31,5h contact time)

- Appreciation of the need for regulation of technical infrastructural services markets.
- Appreciation of infrastructural planning law in concert with urban development and stakeholder actions.

Contents

- Basic economic and legal concepts relevant for technical infrastructure service markets
- Glimpses into the history of regulation, liberalization, de- and re-regulation of technical infrastructure sectors in the U.S. and Europe with exemplary emphasis on Germany
- Examples of infrastructural planning law at European Community and German national levels
- Examples of real-world implementation of technical urban services projects (e.g. heating grids, renewable power facilities installations ...), in their technical and project development aspects
- Reflection on aims and success of regulatory reform and planning law provisions in the technical urban service sectors, esp. in light of their contribution to sustainability goals

Recommended Literature

Varying, will be provided prior to course.
