Structure of the Study Program

# **Brief Profile**

German Version below

The Master of Science Degree Programme REAP – "Resource Efficiency in Architecture and Planning" is an international and interdisciplinary programme at HafenCity University Hamburg that is concerned with sustainable planning on different scales.

It aims to enable participants to promote sustainable architecture and urban development in different geographical and cultural settings.

Lectures and seminars are grouped around the central project work: real-time, real-world case studies, in which students, with help and guidance from faculty, develop recommendations and solutions for applied tasks.

The REAP programme consists of 17 study modules taught over 2 academic years. During their studies, REAP students will obtain knowledge and skills within the following areas:

# - Sustainability

- Water, Material and Energy Cycles in the city
- Resource efficient urban technologies and infrastructure
- Economics and administration of buildings and urban services
- Legal and policy instruments
- Urban Planning on different scales
- Skills development: dimensioning, preception, assessment and decision making in the field of sustainable resource technologies
- Research methods and decision support techniques

REAP is not an architectural design course.

The master course is not focused on a single discipline -it is interdisciplinary and follows an integrative and multidimensional planning approach.

# Kurzbeschreibung

Der Masterstudiengang REAP - "Ressourceneffizienz in Architektur und Planung" ist ein internationaler und interdisziplinärer Studiengang an der HafenCity Universität Hamburg, der sich mit nachhaltiger Planung auf verschiedenen Ebenen beschäftigt.

Ziel ist es, die Teilnehmer zu befähigen, nachhaltige Architektur und Stadtentwicklung in unterschiedlichen geografischen und kulturellen Kontexten zu fördern.

Die Vorlesungen und Seminare gruppieren sich um die zentrale Projektarbeit: reale Fallstudien, in denen die Studierenden mit Hilfe und unter Anleitung der Dozenten Empfehlungen und Lösungen für angewandte Aufgaben entwickeln.

Das REAP-Programm besteht aus 17 Studienmodulen, die über 2 Studienjahre hinweg unterrichtet werden. Während ihres Studiums erwerben die REAP-Studenten Kenntnisse und Fähigkeiten in den folgenden Bereichen:

# - Nachhaltigkeit

- Wasser-, Material- und Energiekreisläufe in der Stadt
- Ressourceneffiziente städtische Technologien und Infrastruktur
- Wirtschaft und Verwaltung von Gebäuden und städtischen Dienstleistungen
- Rechtliche und politische Instrumente
- Stadtplanung auf verschiedenen Ebenen
- Kompetenzentwicklung: Dimensionierung, Wahrnehmung, Bewertung und Entscheidungsfindung auf dem Gebiet der nachhaltigen Ressourcentechnologien
- Forschungsmethoden und Techniken zur Entscheidungsfindung

REAP ist kein Studiengang für Architekturentwurf.

Der Masterstudiengang ist nicht auf eine einzelne Disziplin ausgerichtet - er ist interdisziplinär und verfolgt einen integrativen und multidimensionalen Planungsansatz.

# Module Plan

# Gruppengrößen

Die Lehrveranstaltungen in REAP (M.Sc.) umfassen in der Regel folgende Gruppengrößen:

- Vorlesungen (nur REAP): 10-50
- Vorlesungen (FaSt bzw. übergreifend für mehrere Studiengänge): 10-240
- Seminare: 10-50
- Übungen: 10-50
- Projekte: 10-30

# Group sizes

The courses in REAP (M.Sc.) generally comprise the following group sizes:

- Lectures (REAP only): 10-50
- Lectures (FaSt or overlapping for several degree programs): 10-240
- Seminars: 10-50
- Exercises: 10-50
- Projects: 10-30

Module Descriptions

# Facets of Sustainability

REAP M.Sc.

#### HCU Hamburg

REAP-M-Mod-101	Type of module (C/CE/E)	SWS	Student workload	CP (according to ECTS)	Semester (proposed)	Duration
REAP-M-Mod-101	С	3	150 h	5	1	1
	I	Module Coordinato	r			
Fundamentals and Methods				Prof. Irene Peters une	, Ph.D. (Infrastruktu d Stadttechnik)	irplanung

#### Courses

Title	Course type	SWS (Contact Hours)
Facets of Sustainability	lecture	3 SWS (= 31,5 h)

#### Teaching and learning activities

Title	face-to-face teaching	self study,	thereof: examination preparation	thereof: projectroom allocation time	Total student workload
Facets of Sustainability	31,5 h	0		118,5 h	150 h

#### **Objectives and contents**

# Objectives of qualifications (Competencies)

- "Ecological literacy": Acquaintance with basic mechanisms occurring in and affecting the natural world: e.g. biogeochemical cycles, food webs etc.
- Acquaintance with major sustainability deficits, regionally and globally, of the physical-ecological and social kind (e.g., climate change, biodiversity decline, micropollutants, the plastics crisis, poverty, environmental injustice)
- "Connecting the dots": Appreciating the connectedness of sustainability aspects and deficits across the globe (environmental degradation, poverty, education, democracy, human rights observance, lifestyles, health, economic regimes, international trade, global sourcing of raw materials)
- Basic notion of different disciplinary approaches towards operationalizing the concept of sustainability, (e. g. from ecology and economics), appreciating their disciplinary roots, their applicability and usefulness

#### Contents of the module

- How sustainability and sustainability deficits have been perceived over the last centuries. Classics of the environmental and sustainability literature (e. g. Schumacher, Carson, Club of Rome) and policy documents relating to sustainability (e. g. Brundtland Report, Agenda 21)
- Disciplinary and interdisciplinary approaches for analyzing the sustainability theme, concepts operationalizing "sustainability" (e. g. the Planetary Boundaries framework)
- Introduction to a range of selected sustainability deficits (ecological and otherwise) and efforts to redress them, with a revisiting of
  their scientific foundations, presented by guest speakers, experts in their field (e. g. climate change, the threat to freshwater
  resources, the global food system, raw materials mining, environmental justice),
- Sustainability politics and metrics: Guiding principles and action plans the world has come up with, at the international, national and local levels; sustainability indicators
- Students' own encounters with sustainability deficits, in their own geographical and political contexts at home

#### Recommended literature

- The materials for this class vary with the varying topics each year. Some staple resources include:
- World Commission on Environment and Development (1987). Our Common Future. (Also known as the Brundtland Report)
- The papers on "Planetary Boundaries", latest September 2023, see stockholmresilience.org
- The IPCC Assessment Reports and Special Reports (www.ipcc.ch)
- Various United Nations Reports on different resources, like World Water Report (see unwater.org)

#### Forms of teaching and learning

Lectures and class discourse, with inputs from different guest speakers, experts in their fields, and contributions by students

### Assessment and ECTS awarding criteria

Precondition of examination (Pre-requisite for examination, attendance)
Assessment methods and criteria (type, duration & scope)
Term Paper ((S)
ECTS awarding criteria
successful completion of the module examination
Calculation of the module grade
S = 100%
Weighting of the module grade
The module grade is included in the final grade at a rate of 4.17 %.

#### **Additional Information**

Previous knowledge / Requirements for participation (in form and content) in accordance with examination regulations

Physics and chemistry at the high-school diploma level

Applicability of Module

This module is usable for REAP (M.Sc.)

Special requirements for workplaces

(room type / extent of use presence / extent of use project work and/or model construction in self-study)

Frequency of Offering

Every winter term

Research Methods and Statistics	31,5 h	118,5 h			150 h

### **Objectives and contents**

#### Objectives of qualifications (Competencies)

- Ability to appreciate what constitutes the scientific method
- Ability to critically reflect the scientific authority of different information sources
- Ability to perform some basic inferential statistics
- Ability to appreciate the malleability of statistical analysis
- Encounter with a programming language (e. g., Matlab, R, Python ...)

Experience to search for, obtain, and understand data; import and format data for analysis in a programming languages

#### Contents of the module

- What constitutes the scientific method?
- Rules of academic work, esp. conventions for referencing sources (input by HCU librarians)
- Introductory statistics, descriptive and inferential
- Students develop a topic for an inferential statistical analysis and obtain data for it (with instructor's support)
- Students conduct an inferential statistical analysis in a programming language

#### Recommended literature

- - George Orwell (1946). Politics and the English Language.
- Samir Okasha (2016). Philosophy of Science. A Very Short Introduction. 2nd edition.Oxford University Press.
- - Jeremy Balka Statistics (https://www.jbstatistics.com)
- - Documentation of the language used for statistical analysis; currently it is Python

Forms of teaching and learning

Lectures and consultations with instructor to discuss student ideas for statistical analysis

#### Assessment and ECTS awarding criteria

Precondition of examination (Pre-requisite for examination, attendance)
none
Assessment methods and criteria (type, duration & scope)

# Legal and Economic Instruments of

# **Environmental Policy**

Fundamentals and Methods			Prof. Dr. Martin Wickel, LL.M. Recht und				
Subject Area				Modulo Coordinators			
REAP-M-Mod-103	С	3	150 h	5	1	1	
Module number	Type of module (C/CE/E)	SWS	Student workload	CP (according to ECTS)	Semester (proposed)	Duration	

# Courses

Title	Course type	SWS (Contact Hours)
Legal and Economic Instruments of Environmental Policy	Lecture	3 SWS (31,5 h)

# Teaching and learning activities

Title	face-to-face teaching	self study,	thereof: examination preparation	thereof: projectroom allocation time	Total student workload
Legal and Economic Instruments of Environmental Policy	31,5 h	118,5	included in self study	0	150

# **Objectives and contents**

Ohiective	es of qualifications (Competencies)
•	Understanding of the legal and economic concepts of human and organisational action. Understanding of the rationale of different types of environmental policy measures. Good knowledge of specific fields of International and European environmental law. Understanding of the instruments in the field of national (Germany and other EU Member States) environmental I law. Ability to relate an environmental goal to a choice of instruments to achieve this goal
Contents	of the module
•	Principles of environmental laws. Types of instruments in the environmental law (command and control, economic, procedural, informational, constutional law etc.) Types of environmental policy measures (emission control, BACT regulation, fees, tradeable permits, subsidies, feed-in- tariffs, etc.) in theory and practice, with examples from Europe and around the world. Role of international law in the construction of national law (in particular, EU law vs. national law of the EU member states).

#### Teaching and learning activities

Title		face-to-face teaching	self study,	thereof: examination preparation	thereof: projectroom allocation time	Total student workload
1.	GI Science	21 h	79 h	Included in self-	0 h	100 h
2.	Methods of Integrated Urban Planning	10,5 Sh	39,5 h	study	0 h	50 h

#### **Objectives and contents**

 Objectives of qualifications (Competencies)

 • Knowledge of methods of integrated planning, decision making and presentation skills.

 • Self-organization and project-organization.

 • Implementation of different methods and support of REAP project work (P1, P2 and P3).

 Contents of the module

 I. GI Science

• Knowledge about characteristics and complexity of spatial data (geometrical, thematic, topological, temporal components) and the importance of a proper data modeling stage.

• Introduction to suitable GIS data models for a given application (advantages and disadvantages of vector and raster as well as methods for the transformations between each other).

• Introduction to suitable operations for a given application based on an understanding of the principles of basic geometrical, thematic and topological operations.

Basic principles of modern cartographical representation of qualitative and quantitative data

II. Methods of Integrative Urban Planning

• Methodology of scenario techniques, thinking about the future in different variations, pictographic descriptions of different future scenarios.

• Introduction to instruments of economic evaluation of projects, application-oriented simplified methodology.

- Introduction to the goal tree (approaches, leading lines, objectives, assessment criteria).
- Project planning phases (site analysis, concept, development of overall framework, details, SWOT-analysis).
- Project structures, time management, (multicultural) decision making and network in projects/ working groups.
- Certification system "sustainability in neighborhoods" (introduction to DGNB system).
- Development of illustrations of existing data and concepts overlapping contents (integration).
- Graphic presentation methods (posters, flyers, brochures).

#### **Objectives and contents**

 Objectives of qualifications (Competencies)

 • Ability of planning and conducting interdisciplinary exercises in a short, fixed period with the focus on selected international metropolitan cities or regions (except Hamburg).

 • Self-organization of more independent, integrated and work-related exercises in groups.

 • Project-organization and development of core skills such as communication, cooperation and a multi- and interdisciplinary approach.

 Contents of the module

 • Targets and contents of the project will be elaborated each semester by the REAP-team.

 • Students can make suggestions about the contents of the project.

 • Targets and contents of the project are based on the modules of the current semester.

Urban Material Cycles	31,5 h	118,5 h	included in self study	0 h	150 h

#### **Objectives and contents**

#### Objectives of qualifications (Competencies)

Being acquainted with a range of urban material streams: construction materials (conventional and renewable), material streams for operating technical infrastructures, material streams present in municipal solid waste; their energy and environmental profile over their life cycle, conventional disposal paths and recycling opportunities.

Being capable of recognizing and promoting opportunities to implement resource efficiency and circular economy processes in construction and solid waste management.

#### Contents of the module

Introduction to major construction materials (mineral binders, concrete, steel, glass, wood) and other materials used in construction of buildings and infrastructure:

- Mining, refining, production process of material
- Performance, physical and chemical properties, typical applications
- Recyclability, status of recycling for the material
- Basic knowledge of energy and resource use and emissions over the material's life cycle
- Regimes for incentivizing circular economy processes
- Reuse vs. demolition of buildings and built infrastructure
- Supply chain management options (esp. for globally sourced materials with non-sustainable extraction)

Fundamentals of municipal solid waste management, with sensitivity to conditions in different geographical contexts:

- Municipal solid waste stream and its composition
- Conventional disposal paths and disposal facilities, and associated resource use and emissions
- Recycling technologies and facilities, resource use and emissions implied by recycling path(s), status of recycling for waste stream (fractions), emissions and regulatory regimes for incentivizing circular economy processes
- Synergies with industrial waste and wastewater management (e.g., concerning the bio-organics fractions)

Climate Responsive Architecture and Planning	31,5 h	118,5	In self-study	0	150h

#### **Objectives and contents**

Objectives of qualifications (Competencies)

- Potential to reach Zero-Energy-Situations in the different main climates zones.
- Knowledge of interdependencies between buildings, their arrangement in urban space, energy demand, comfort and user behaviour.

Contents of the module

- Comfort criteria (specially thermal in summer and visual).
- Passive-solar optimization of buildings, passive cooling methods and their application to different climatic locations.
- Urban design requirements for climate-responsive energy applications.
- Low-energy planning strategies for urban quarters and buildings.
- Urban buildings as energy generators.
- Building user behaviour and its impact on energy performance of buildings and the sustainability of urban environments.
- Vernacular architecture and best practice examples as sources for climate responsive building design.
- Tools for the assessment of climate and derivation of design rules.

# Economics and Planning of Technical Urban Infrastructure Systems

Module number	Type of module (C/CE/E)	SWS	Student workload	CP (according to ECTS)	Semester (proposed)	Duration	
REAP/SP-M-Mod-304	CE	3	150 h	5	3	1	
Subject Area				Module Coordinator			
Resources, Institutions, and Instruments				Pr (Infrastruk	of. Irene Peters, Ph turplanung und Stad	n.D. dttechnik )	

#### Courses

Title	Course type	SWS (Conta	ict Hours)
Economics and Planning of Technical Urban Infrastructure Systems	Lecture	3 SWS (= 31,5 h)	30

#### Teaching and learning activities

Title	face-to-face teaching	self study,	thereof: examination preparation	thereof: projectroom allocation time	Total student workload
Economics and Planning of Technical Urban Infrastructure Systems	31,5 h	118,5 h			150 h

#### **Objectives and contents**

#### Objectives of qualifications (Competencies)

(To clarify: "Technical Urban Infrastructure Systems" here covers primarily energy supply, water supply, wastewater management, and solid waste management. The course does not deal with all of these each year, applications vary.) Students have an appreciation of

- the principles underlying the (economic) functioning of technical urban infrastructure service markets (elements of Industrial Organization and Regulatory Economics)
- the need for regulation of technical infrastructural service markets, and different regulatory regimes and institutions
- competition law and infrastructural planning law in concert with urban development and stakeholder actions
- the potential for digitalization to enhance performance and resource efficiency of technical infrastructure service provision .

#### Contents of the module

(To clarify: "Technical Urban Infrastructure Systems" here covers primarily energy supply, water supply, wastewater management, and solid waste management. The course does not deal with all of these each year, applications vary.)

Joint module of REAP and Urban Planning, offering ...

basic economic and legal concepts relevant for technical infrastructure service markets, like: Cost patterns, market forms (e.g. competition in the market vs. for the market), regulatory models (e.g. rate-of-return or yardstick) regulatory institutions (e.g. in Germany, Federal Network Agency and the Monopoly Commission)

glimpses into the history of regulation, liberalization, de- and re-regulation of technical infrastructure service sectors in the U.S. and Europe, with exemplary emphasis on Germany and examples from other countries

- competition law and examples of infrastructural planning law at European Community and German national levels
- aims and success of regulatory reform and planning law provisions in the technical urban service sectors
- potential of digitalization, models of smart infrastructure management (e.g., infrastructure BIM, decentralized digital load supply management, smart tariffs, urban neighborhoods as actors in the energy market)
- role and scope of the municipality, and municipal actors, in shaping infrastructural service provision and markets
- examples of real-world implementation of technical urban infrastructure projects (e.g. heating grids, virtual power plants, microgrids, source-separation wastewater projects...) in their technical and project development aspects ... all this in light of "smart" provision to enhance performance and resource efficiency and to promote sustainability goals

Title	face-to-face teaching	self study,	thereof: examination preparation	thereof: projectroom allocation time	Total student workload
Cost-Benefit Analysis of Technical Infrastructure Projects	31,5 h	118,5	in sel	fstudy	150 h

#### **Objectives and contents**

#### Objectives of qualifications (Competencies)

For students to be able to understand, to critically appraise and to perform simple versions of ex-ante and ex-post decision support and project evaluation along the methodological lines of

- Cost-Benefit Analysis (emphasis of the course)
- Alternatives in Decision Analysis (smaller part of course time)

#### Contents of the module

Joint module of REAP and Urban Planning, offering ...

- Common theoretical foundations (Decision Theory) for Cost-Benefit Analysis and Decision Analysis
- Economic Cost-Benefit Analysis: Essential elements such as different accounting frameworks (financial and economic accounting), discounting, valuation of intangibles (through monetization), shadow pricing, etc.
- Elements of Decision Analysis, esp. in contrast to Cost-Benefit Analysis (e.g. monetization vs. refraining from monetization; elicitation of decision maker's and makers' preferences, i.e. individual vs. aggregate preferences)
- Elements common to both types of analysis (e.g., the treatment of uncertainty)
- Case studies as examples for the application of Cost-Benefit and Decision Analysis

#### **Objectives and contents**

Objectives of qualifications (Competencies)
<ul> <li>Application of the appropriate technical, scientific and/ or artistic methods proving the ability to work independently on a special topic in a short, fixed period and demonstration of a thorough knowledge/ understanding of the subject</li> <li>Deepening abilities in interdisciplinary work alongside the ability to develop disciplinary methods/ knowledge</li> </ul>
and applying them in other fields
Development of core skills: communication, cooperation and a multi- and interdisciplinary approach
Contents of the module
<ul> <li>Students should make suggestions about the contents of their thesis</li> <li>Targets and contents of theses outside the REAP-contents have to be approved</li> </ul>
Recommended literature
Defined by selected thesis topic.
Forms of teaching and learning
Thesis: Autonomous work (students are supported by the appropriate REAP-specialist). Further important information can be found on the HCU-Website (Master > REAP > For Students > REAP Master Thesis Infos).

#### Assessment and ECTS awarding criteria

Precondition of examination (Pre-requisite for examination, attendance)

The thesis has to be written by single student, students wishing to work together (maximum 2) have to apply for it. The thesis must be completed within 22 weeks. At the end of the fixed period the student has to submit a written report.

Assessment methods and criteria (type, duration & scope)

The final assessment of the thesis is an oral exam (colloquium) and a presentation (TH, PR, KO). Submission: The thesis must be submitted digitally to the Examination Office not later than on the last day of the processing period. For the digital submission please save your work as pdf in the HCU-Cloud https://cloud.hcuhamburg.de with the file name as following "Last name thesis BA or MA". Further information: www.hcuhamburg. de/en/student-services/examination-office/thesisexamination/

ECTS awarding criteria

successful completion of the thesis, presentation and colloquium

Calculation of the module grade

TH = 75%, PR + KO = 25%

The grade is determined by both reviewers equally.

Weighting of the module grade

The module grade is included in the final grade at a rate of 25 %.

#### **Obejctives and Contents**

Obejctives and Contents (Competencies)

- Reflective Competencies: Scientific analysis and reflection: Students can analyze what they have learned and they can integrate existing and new knowledge in complex contexts

- Cultural competencies: Transdisciplinary and Intercultural Communication: Students will be able to engage in factual exchange with representatives of different academic fields of activity

- Perceptual and creative competencies: Students are able to apply techniques for creative and innovative design independently

- Competencies for action: Proactive and responsible action

Contents

#### [Q] STUDIES I und [Q] STUDIES II:

Different event formats with a theoretical focus

- Offers for training perception and creativity

- Practical project work such as the conception of events and their implementation

#### teaching areas:

- Science | Technology | Knowledge
- Media | Art | Culture

- economy | politics | society

Recommended Literature

To be announced in Seminar

Teaching and Learning methods

If applicable, group work, project work in interdisciplinary working groups, e-learning components in the form of videos, digital synchronous teaching, face-to-face teaching, excursions (optional)

#### Examination achievements and requirements for the award of CPs

Precondition of Examination

Regular active participation (attendance required for at least 80% of the session dates)

Type of Examination

[Q] STUDIES I and II: Examination performance varies depending on the course chosen and will be announced at the beginning of the semester.

Prerequisites for the award of CP

80% participation, active participation, accompanying assignments

Composition of Module Mark

Examination of [Q] STUDIES I is 50% of the module grade. Examination of [Q]STUDIES is 50% of the module grade.

Weighting of the module grade

Results from the curriculum of the respective study program.

#### Supplementary information

Prior knowledge for participation in the module (form and content)

Knowledge and techniques of scientific work are recommended.

Usability of the Module/ Verwendbarkeit des Moduls/ Access requirements for future modules (mandatory or recommended)

Module is usable in Architektur (M.Sc.), Bauingenieurwesen (M.Sc.), Geodäsie und Geoinformatik (M.Sc.), REAP (M.Sc.), Stadtplanung (M.Sc.) und Urban Design (M.Sc.)

Special Need for Workplaces (Type of room / extent of use Presence / extent of use Project work and/or model building in self-study)

### **Objectives and Contents**

Obejctives and Contents (Competencies)
Knowing the typical problems, instruments, methods, actors and organizational contexts of project management, its theoretical references and forms of practice, also beyond one's own discipline. Apply and reflect on the instruments and methods of project management in a discipline-specific context.
Contents
1) Lecture (depending on the study program, the German or English lecture is chosen)
Basics: Project Management Lecture (for all English-language study programs)
Instruments, actors, problems and organizational context of project management
<ol> <li>Accompanying seminars</li> <li>Application and deepening of the lecture contents in the disciplinary context or according to study programs</li> </ol>
Recommended Literature
1.) Lecture
Basics: Project Management Lecture (English)
Meredith, Jack R.; Mantel, Samuel J.; Shafer, Scott M. (2016): Project management. A managerial approach. 9. ed., internat. student version. Singapore: Wiley.
Project Management Institute (2013). A Guide to the Project Management Body of Knowledge (PMBOK Guide) (5th ed.). Newton Square, PA: Project Management Institute, Inc.
Teaching and Learning methods
Lecture: Face-to-face event with eLearning components in the form of videos, digital synchronous course, excursion (optional)
Seminar: Varies depending on the study program: group work, project work in interdisciplinary working groups, eLearning components in the form of videos, digital synchronous teaching, face-to-face teaching

# Examination achievements and requirements for the award of CPs

Precondition of Examination

Lecture: none Seminar: 80 % Participation Type of Examination

Lecture: Exam 90 min. Seminar: form of Examination tob e defined by ach program

Prerequisites for the award of CP

80% participation, active participation, accompanying assignments

Composition of Module Mark

Examination of the lecture is 50% of the module grade. Examination of the seminar is 50% of the module grade.

Weighting of the module grade

Module grade is 4.17% of the final grade.

### Supplementary information
